

Athena Progress – February 16, 2016 – 11:30am

Minutes:

- 1) none

Achievements:

- 1) Fixed – install / offline installer for Bravo
- 2) Added – ST support for memload (ordinal 1) standard rundll32 (ordinal 2)
 - a. Fixed ramonly – ordinal 1 must createthread and return
- 3) Added TestEngineLoop2 – 5 failed beacon / uninstall
- 4) Fixed - maxchunksize in tasker not working - fixed shell.py:242 (misspelled do_maxchunksize)
- 5) Fixed – uninstall timeout – moved logic into command module
- 6) Fixed – uninstall after failed beacons – moved logic into command module
- 7) Non-issue - large files - error Error Code = 0xA0000101 (validate config)
processing data size
command execution timeout
batch execution timeout
- 8) Non-issue – state file – start large file download/reboot/waitfordata
 - a. This just took a really long time to finish
- 9) Non-issue - 4 gets & 4 puts with large file (this was a test script error)
- 10) Non-issue – attempt to install as user – fails (privileges for registry and data files)
- 11) Update - compression size to 32K (still testing but it does reduce processing time)
- 12) Non-issue – state file not releasing during test – this was a testing issue

Test Status:

- 1) Dart Testing – testing HERA
- 2) Testing compression size change

Issues:

- 1) Athena is failing on Win10 install – possible issue with hook method
- 2) Athena is failing on Win8 – remote access not configured properly until next reboot
- 3) Athena – linux offline not working
- 4) Bravo – large file TestCommandEngine is failing
